SETTING UP YOUR STUDY AREA

Setting up a study area will help you get into the "study habit".

If you always work in this one place your brain will begin to switch into "study mode" as soon as you sit down. In other words, you "activate" your ability to concentrate.

In an ideal world the study area would be:

**QUIET**

**FREE OF DISTRACTIONS**

**COMFORTABLE**

**WELL LIT AND VENTILATED**

In the real world the first two are difficult to achieve! There is no ideal place to study, only one in which you are able to study. This is a very individual place.

Firstly, decide what your study needs are.
- **Do you need silence or some background noise?**
- **Do you study best when sitting or lying down?**
- **Do you prefer the room light or direct light from a table-lamp?**

The choices are entirely up to you.
Secondly, once you have decided upon your needs, **claim your territory**!

When setting up your workplace you will need to organise your materials so that they are ALWAYS at hand. There is nothing worse than interrupting study to find something that should have been there already. You will definitely need a bookshelf for books and notes and a container or drawer for things such as stationery.

**IF YOU MIGHT NEED IT, IT SHOULD BE THERE!!**

It is also helpful to have a large noticeboard in front of your study area to pin timetables, short notes, "find-outs" and "must-do's". It will also be an ideal place to put memory aids so that they are always in sight.

Finally, **keep it tidy and organised**! If you always have to search for materials you will waste valuable time and your concentration will fade.

In fact, make it very clear to everyone who may use that room that your study area is sacred - if something then goes missing or runs out then you only have yourself to blame.

**KEEP IT EQUIPPED - KEEP IT TIDY - KEEP USING IT!**
DETERMINING YOUR CONCENTRATION-SPAN

- Go to your study area and get settled.
- Read a large section of the text book belonging to your least favourite subject, preferably from part of the book which has not been covered before. Note the time you start.
- Make an effort to LEARN and RECALL the information you read.
- Note the time at which you find your mind beginning to wander, no matter how little. This will be your minimum concentration-span.
- Repeat the task with your favourite subject. This will be your maximum concentration-span.

You will probably find that your concentration-span varies between ten and twenty minutes depending on the subject, how you feel, the amount of rest you have taken, and your eating habits.

Now that you know what your own brain can cope with you can sort out your reading and revision to suit.

NEVER study beyond your concentration-span. You may still be reading but your brain will be losing most of the information it takes in. This makes it pointless to go on. You may satisfy your need to feel as if you are working hard, but the amount you actually remember will get less and less.

MAXIMISING RECALL

After studying for the time you found was best, you must then take a rest for about five minutes. Do something else not connected with your work. Listen to music, have a snack, refresh yourself - but don't stop thinking about what you were reading.

This may be an unusual thing to do in the middle of a study session, but your brain needs that time to sort out the information in your short-term memory. At the end of the rest period, the information you were reading will be much clearer than it was to begin with.

Short-term memory lasts between 12 to 48 hours. If you stopped at this point you would be able to recall only about 10-20% of the information you read.

To get the information into long-term memory you must REVIEW.

REVIEWING YOUR CHOSEN STUDY TOPIC

After your five-minute rest, read the same information again. Concentrate only on those points that are most important.

Then take another five-minute break and re-read once more, fitting all the bits of information together.

Both of these reviews would be made even better by note-taking in whatever way you find easy and helpful. Make sure that the notes you make are well organised!

ONE WEEK and TWO WEEKS later review the topic again using your notes. By now you should have found that there has been a huge improvement in your ability to remember, understand and use that information.

Finally, you must REVISE. This is simply a way of drawing loose ends together with the same study method but this time using your notes only.

If you use the above methods while you are still following a course of study, your final revision will be made much easier. Some students who have used these methods early find that very little final revision is necessary. They became so good at remembering the work during the course of the year that they didn't need to do any more!
IMPROVING YOUR MEMORY

Study is like building a jigsaw:

- Lay out the pieces
- Sort out the edges
- Build inwards towards the most difficult parts
- Put in the final pieces
- Stand back and appreciate!

In learning, the pieces of knowledge you have can be swapped between several jigsaws in your mind - but there is no pattern which you can follow.

By making patterns yourself all the pieces fall into place. Soon, that wonderful feeling of excitement hits you when you look down and see how the jigsaw fits together.

If you make patterns within your work then several pieces can be missing from the middle, but by looking at their neighbours a guess can be made as to what the missing pieces should be. In other words - you do not have to know everything!

By improving your reading and note-taking skills you can speed up the building of the jigsaw and increase your ability to remember the pattern.

BETTER READING
(THE "Q-S-R" TECHNIQUE)

**Q:** QUICKLY read the page or chapter you wish to study.

**S:** SCAN each page at a time noting key words or sections as you read through fairly quickly.

**R:** READ the page or chapter carefully and thoughtfully, making more notes as you go if you like.
Concentrate on the key words or sections you highlighted, using them as trigger points for recall.

NOTE TAKING

The purpose of notes is not to copy out great chunks of information from books. They should only act as a trigger to help you remember what you have read. Key words are more easily remembered than long sentences!

Notes should be short, to the point, well-organised and easily read. The exact style is up to you and you only. Some tried and tested methods are given in the next section.
SUGGESTED METHODS OF NOTE TAKING

SERIAL NOTES

This is a simple note-making style and is best for making notes during lessons. Don't write everything you hear or read but select out the most important points. Concentrate only on those pointers that will help you recall the lesson content. Improve upon them later when time allows.

Use lots of headings, sub-headings, numbered points, "bullets", etc.

MIND-MAPS

Useful for making short notes for revision. Stretch points outwards from a main point or key word. These are best drawn from notes made during lessons which have then been added to with further information from text books. Software is also available to make drawing and revising a Mind Map easy - go to www.mindmapper.com

KEY-WORD INDEXING

This requires the use of index cards which can be purchased at any stationers. As you revise notes write down key-words in two categories: HEADERS and LINKED WORDS.

Use the HEADERS as titles for the index cards, and beneath this write a list of the LINKED WORDS. When revising a topic have the index cards in front of you. With practice, just the thought of a HEADER word will trigger recall of most, if not all, of the rest.

For example:

BRAINSTORMING

Brainstorming is best used when revising in groups (but can be used by someone working alone) and combines all of the above techniques.

This is especially good for working out what to put in an essay or extended assignment. Think of everything you can to do with a topic, no matter how odd or unusual. Note down the words and/or ideas, discuss how important they are. From that discussion develop a pattern that makes sense of the things mentioned by getting rid of those that stray from the point.
WORKING OUT PRIORITIES

Priorities can be divided up into:

**URGENT** - must be done *now*.

**IMPORTANT** - must be done *soon*.

**UNIMPORTANT** - must be done *eventually*.

There is, of course, a lot of overlap so you might also list the things you have to do only in order of importance - the top one or two becoming urgent.

Keep a diary and a pencil handy to record things as they crop up.

You could also use a card index, or even a computerised database, whatever you feel you can work with.

If you find that more than two items are urgent, then you are the victim of bad planning - do it better next time!!

**MOST OF ALL**

**BE FLEXIBLE** - LEARN TO FIT THINGS IN

and

**BE EQUIPPED** - DIARY, TIMETABLES, CARD INDEX, ETC.
